WHAT A WONDERFUL HOME

WHAT SHOULD YOU CONSIDER

To start with, you'll need to decide what type of cooker hood you need. This will mostly be determined by the size of your cooker and your budget.

How much do I need to spend to get a good cooker hood?

All cooker hoods have grease filters – these capture grease as it rises from your hob, preventing it from settling on kitchen surfaces and leaving difficult-to-remove residues. Grease filters come in several different materials: aluminium, stainless steel, fleece material or paper. To keep the grease filters clean, you'll need to wash or change them regularly.

Cooker hood lights help you see better as you cook. Most cooker hoods come with two or more lights to illuminate your cooking.

Cooker hoods can be set up to extract air through a duct to a vent in your wall. Alternatively, they can be used in recirculating mode, where the air is passed through carbon filters before being recirculated back into your kitchen.
